First you need to decide whether you will be traveling by car or air.

If traveling by car, take all your equipment. If by plane, take all the equipment you can.

When traveling by plane, carry your equipment in a bag or case that will fit under the seat or in the overhead compartment. Keep your equipment close.

If you have an extra camera body, take it. If you don't have an extra body, consider borrowing one. It is better to be safe than sorry.

Consider taking a computer and/or an External hard drive on your trip. You can download your photos after each shoot.
