

## Lightroom

### General Notes

- If shooting both Raw and Jpegs and import both, only the Raw files will show up in LR
  - However, you can go into Preferences -> General -> can check to see both
- Question Mark “?” appears next to Photos
  - Means that LR can not find the photo files location
    - Right click on the Question Mark “?” and select “**Find Missing Folder**”
    - This will take you to Explorer Screen
      - Find the Folder
      - Select Choose
  - Could be a problem if move Folder from F to H Drives
  - *If you need to move Folders do so in LR*
- Do not use the DNG file format (Under Preferences)
-
